- VI. For some reading materials on Montana fishing waters, you might want to pick up one or more of the following books from your library or local bookstore:

*The Montanan's Fishing Guide* by Dick Konizeski. There are two volumes: Waters WEST of the Continental Divide (which is our area) and Waters EAST of the Continental Divide. This book would be helpful as it provides contour maps of some of the larger lakes as well as to what species can be found in that body of water. West Volume updated in 1998.

*The Montana Angling Guide* by Chuck Fothergill and Bob Sterling which describes fisheries as well as providing good area maps to locate the fishing holes and access points.

*The Angler's Guide to Montana* by Mike Sample details 16 major trout streams, 70 of their tributaries, and 108 lakes and reservoirs--includes Yellowstone and Glacier National Parks.

*Montana Fishing* by Dale Burke.
